Exercise 02-01 - Using patterns, rules, asserts and reports

Explanation

One of the possible solutions for this exercise is in solution/solution.sch:

- The Schematron schema contains a single pattern with a single rule.
- This rule matches on every <ID> element.
- The assert tests whether the string length of this element is 9 characters long. If *not* it issues a message.
- The report tests whether the ID starts with the character X. if so it issues a message.
